

AMENDMENTS TO THE SPECIFICATION:

Delete the paragraph beginning at page 2, line 21 through page 3, line 2 with the following paragraph:

The process of using LS21 which supports attribute judgement and number transformation for WAC users in the prior art is hereinafter described in detail: Provided that user 10, who has the short number 5001 and long number 5550888, wants to call a cross-region user 12 who has the short number 7001 and long number 7770888 in the same group. At this time, user 10 may dial the short number 7001 to LS21 directly. After LS21 finds that the short number is not a short number of its own exchange, it adds 600N1N2 before the short number automatically, which changes the short number into 600N1N2+7001, then directs and connects the 600 route to SSP 30. After detecting the intelligent call, SSP 30 reports the intelligent call to SCP 40. SCP 40 finds the long number being called is 7770888 based on the long number 5550888 of the calling and the short number 7001 of the called. Then, SCP 40 instructs SSP 30 to connect to the long number being called ~~770888~~ 7770888. Thereafter, the connecting process between SSP30 and the called is the same as an ordinary call.
